

**The Gene: An Intimate History**  
Siddhartha Mukherjee (2017)

**PROLOGUE**

pp.1-16      Personal

**PART I: The Missing Science of Heredity (1865-1935)**

pp.17-55      Mendel, classics, Darwin

pp.56-63      Rediscovery of Mendel

pp.64-85      Eugenics

**PART II: In the sum of the parts, there are only the parts: Deciphering the mechanism of inheritance (1930-1970)**

pp.89-100      Morgan

pp.101-110      Fisher & Dobzhansky

pp.111-118      Griffith and transformation; Muller and mutation

pp.119-132      Nazi biology, Lysenkoism

pp.133-138      Avery

pp.139-160      Wilkins, Franklin, Watson, and Crick

pp.161-171      Beadle, Genetic code

pp.172-184      Regulation, replication, recombination

pp.185-200      Development, *C. elegans*

**PART III: The Dreams of Geneticists: Sequencing and cloning of genes (1970-2001)**

pp.203-214      Berg et al, Boyer & Cohen, recombinant DNA

pp.215-224      Sanger sequencing

pp.225-235      Asilomar

pp.236-252      Commercialization

**PART IV: The Proper Study of Mankind is Man: Human Genetics (1970-2005)**

pp.255-258      Personal

pp.259-271      McKusick and human mutation

pp.272-277      Neo-eugenics

pp.278-292      Associating gene with disease (Huntington's)

pp.293-305      Prehistory of human genome project

pp.306-321      Path to sequenced human genome

pp.322-326      Characteristics of sequence of human genome

**PART V: Through the Looking Glass: The Genetics of Identity and "Normalcy" (2001-2015)**

- pp.329-351 Human lineage and race
- pp.352-369 Gender determination and identity
- pp.370-390 Twins
- pp.391-413 Epigenetics

**PART VI: Post-Genome: The Genetics of Fate and Future (2015-...)**

- pp.417-436 First gene therapy attempts
- pp.437-462 Genetic diagnosis (association of genotype with phenotype)
- pp.463-479 Germline modification, CRISPR
- pp.479-483 Manifesto

**EPILOGUE**

- pp.485-495 What is natural?
