

GENERAL POLICY

Environmental Health Perspectives (EHP) is a peer-reviewed journal dedicated to the discussion of the effect of the environment on human health. *EHP* comprises 17 issues annually with monthly sections devoted to children's health and environmental medicine, a toxicogenomics research section published with toxicogenomics news in separate quarterly issues, and an annual review issue. We also publish a quarterly *Chinese-Language Edition* and occasional special issues. All scientific articles are subject to rigorous peer review. The primary criteria for publication are environmental significance and scientific quality.

BREADTH OF COVERAGE

Environmental health science and environmental medicine comprise many fields of study; therefore, *EHP* will consider scientific progress in all fields. Cross-fertilization and serendipity have proven to be extremely important in the advancement of science in general, and this must hold true for the environmental health sciences. *EHP* will consider articles from a wide range of scientific disciplines encompassing the most basic research to the most innovative technologies. Researchers concerned with mechanisms of toxicity, new approaches for detecting or remedying environmental damage, and the identification and characterization of genes involved in the manifestation of environmentally related disease are particularly encouraged to submit. *EHP* recognizes the vital interconnection between the environment and human health. Physicians and others working in environmental medicine are encouraged to submit reports for publication in the Environmental Medicine Section. *EHP* also addresses ethical, legal, social, and policy issues.

Scientific debate can lead to new research and discoveries. Opinions and ideas based on scientific observations are welcome for publication in all *EHP* editions. The formats available for publication include editorials and commentaries. In either format, *EHP* strives for objectivity and balance.

PUBLICATION SEQUENCE

Realizing the importance of rapid publication of new findings, *EHP* has adopted a two-step process to expedite publication:

- 1) *EHP*-in-Press: *EHP* publishes author-supplied unedited PDF versions of articles online generally within 24 hours of acceptance as *EHP*-in-Press (<http://www.ehponline.org>). These articles have undergone peer review and author revisions but have not been copyedited. The *EHP*-in-Press articles are completely citable using the assigned DOI (Digital Object Identifier) code for the article. The DOI code enables the article to be immediately referenced and establishes publication priority. The PDF version of *EHP*-in-Press articles will be replaced with the copyedited, formatted version as soon as possible, but importantly, the DOI code will remain with the copyedited article. In addition to the DOI code, the copyedited article will include assigned volume and page numbers that will allow full conventional citation. The final version may be slightly different as a result of the editing process, but no substantive changes will be allowed. Any substantive changes at this stage will require an erratum to be published.

- 2) Print publication: As print journal space permits, articles will be published in order of acceptance in one of *EHP*'s print editions.

COMPETING FINANCIAL INTERESTS

EHP has a long-standing requirement for authors to disclose competing financial interests. Corresponding authors are required to submit with the manuscript, a declaration of competing financial interests on behalf of all authors. The form is available online and can be downloaded (<http://ehp.niehs.nih.gov/cfi.pdf>). If the article is accepted for publication, the statements are published with the article disclosing either a competing financial interest along with a brief description, a declaration of no competing interests, or a declination to provide such information.

Competing financial interests may include, but are not limited to, grant support, employment (recent, present, or anticipated), and personal financial interests by the authors, immediate family members, or institutional affiliations that may gain or lose financially through publication. Increasingly, researchers are compensated by a host of financial arrangements such as travel, consultancies, advisory board positions, patent and royalty arrangements, stock shares, bonds, and the like. Diversified mutual funds or investment trusts do not constitute a competing financial interest. Further, authors are required to certify that their freedom to design, conduct, interpret, and publish research is not compromised by any controlling sponsor as a condition of review and publication.

Scientists are aware of the absolute necessity to maintain the personal integrity upon which science depends. It is this integrity that full disclosure of competing financial interests hopes to preserve. Therefore, it is imperative that authors and readers understand that a disclosure of a competing financial interest does not imply that the information in the article is questionable or that the conclusions are biased. Authors must also understand that the omission of a pertinent financial interest could, if later revealed, deal a severe blow to the authors' integrity and the credibility of their research.

Our full disclosure policy was established because we are mindful of our obligation to provide responsible and effective oversight to manuscripts published in the journal. We believe it is vital for *EHP* to ensure that information published in the journal is presented in an objective and balanced manner, and that readers have the opportunity to judge for themselves whether bias has been introduced because of any competing financial interests of the authors. *EHP*'s policy of disclosure applies to research articles, commentaries, reviews, and correspondence. Although full disclosure is important, we believe that the decision to publish an article should not be based on a declaration of a competing financial interest.

Our requirements for full disclosure also extend to reviewers and editors, who must disclose to the editor-in-chief any competing financial interests that could be construed as affecting their evaluation of a manuscript. Reviewers and editors are not automatically disqualified because of a competing financial interest. However, reviewers or editors might be asked to recuse themselves, when appropriate.

As is the case for most journals, *EHP* is not in the position to confirm the accuracy of disclosure statements made by our authors. We rely on the veracity of the authors, but *EHP* authors can expect scrutiny of their statements by *EHP* readers and the authors' own employers. *EHP* welcomes this assistance and will publish letters to the editor that address alleged inaccuracies of competing financial interest declarations.

ORIGINALITY OF SUBMISSION

Contributions submitted to any edition of *EHP* must be original works of the author(s) that have not been previously published (print or online) or simultaneously submitted to another publication. Submitted manuscripts are acknowledged upon receipt.

PEER REVIEW

Three reviewers submit comments on each manuscript. Authors are strongly encouraged to submit the names and contact information (including e-mail addresses) of experts in their field of study for addition to *EHP*'s scientific reviewer database. Each reviewer is asked to complete the review within three weeks. If a revision of the manuscript is required, the revised manuscript must be received within six weeks of the request; the submission will be cancelled at that time unless prior permission is obtained. Authors must submit the revised manuscript and a letter responding to reviewers' comments.

PUBLICATION DATE OF RECORD

Research articles accepted for publication in *EHP* will be appear initially as author-supplied PDF files in the *EHP*-in-Press section on our website (<http://www.ehponline.org>) within 24 hours after acceptance. The PDFs will not be corrected or copyedited. The articles will be citable using the DOI (Digital Object Identifier) code. The date the article is included on the website will be considered the publication date of record. This process substantially reduces time to publication after acceptance, thus enabling the establishment of priority. Publication in the printed journal will occur as space permits.

PAGE CHARGES

Authors will be required to pay page charges at the current rate, which is now \$65.00/page. The corresponding author will receive one copy of the issue free of charge. Reprints may be ordered at the time page proofs are reviewed. Late reprint orders will incur an administrative fee. Invited articles and correspondence are not subject to page charges.

PAGE PROOFS

Extensive changes in the manuscript cannot be made at the proof stage. Only minor changes such as spelling, grammar, and referencing are to be requested. If new information has become available after acceptance of the manuscript, an addendum in proof can be included with the permission of the editor-in-chief.

COPYRIGHTS, REPRODUCTION, AND CITATIONS

EHP is a publication of the United States government. Publication of *EHP* lies in the public domain and is therefore without copyright. Research articles from *EHP* may be used freely; however, articles from the Environews Section of *EHP* may contain photographs or figures copyrighted by

other commercial organizations and individuals that may not be used without obtaining prior approval from both the *EHP* editors and the holder of the copyright. Use of materials published in *EHP* should be acknowledged (for example, "Reproduced with permission from *Environmental Health Perspectives*"); pertinent reference information should be provided for the article from which the material was reproduced. For further information, contact *EHP* Permissions (ehprmsn@niehs.nih.gov).

PRESS RELEASES

A press release or press conference should not publicize articles submitted to *EHP* until the article has been published. To determine the date and coordinate press activities, call 919-653-2585. If *EHP* plans a press release on an article, a copy of the text will be supplied to the authors as a courtesy.

ENVIRONMENTAL HEALTH PERSPECTIVES

PERSPECTIVES SECTION

The journal is a forum for the expression of carefully considered ideas and opinions based on scientific principles. Three formats are offered:

Book Reviews are short critical evaluations of recently published books. The editors select the books and the reviewers.

Correspondence is encouraged. Opinions, perspectives, and insight, including comments on articles published in *EHP*, are welcome. *EHP* will allow the opportunity for defense and clarification in response to critical comments. Letters must be appropriately referenced.

Editorials offer opinions and ideas to focus attention on important areas of environmental health and to stimulate discussion of such topics. Our editors, editorial board members, and guest editors contribute these statements.

ENVIRONNEWS SECTION

The Environews Section provides up-to-date information on important issues in environmental health, covering a variety of areas including but not limited to policy, legislative, and regulatory actions; innovative technologic and conceptual research advances; conference and meeting summaries; and emerging environmental problems. The Environews Section disseminates scientific and related information in a manner that is comprehensible and usable by an informed lay, medical, or scientific audience. The Environews Section comprises a variety of formats:

Forum articles are brief reports on topics such as recent research advances, scientific meetings, policy and legislative updates, and academic, industry, government, and nongovernmental organization activities in environmental health.

NIEHS News articles describe current and ongoing intramural research programs of the NIEHS and the National Toxicology Program, as well as profiles of extramural grantee programs and research.

Focus articles are major investigative articles on a wide range of national and international environmental health topics.

Spheres of Influence articles present balanced analyses of legal, regulatory, public policy, and social aspects of environmental health.

Innovations articles describe new discoveries or approaches in environmental health research, remediation, monitoring, and public health policy.

Science Selections are brief summaries of selected research articles published in the concurrent Research Section of *EHP*.

Extramural Update is a dedicated forum for the NIEHS Extramural Program to disseminate information on the programs, meetings, and training opportunities sponsored by this division of the NIEHS.

NCT Update is a dedicated forum for dissemination of information on the programs, meetings, and training opportunities of the National Center for Toxicogenomics (NCT) at the NIEHS.

SUBMISSION OF NEWS INFORMATION

EHP welcomes items of interest for inclusion in the Environews Section of the journal. All items are published subject to the approval of the editor-in-chief. All submissions for this section should be sent to

ehpnews@niehs.nih.gov

or by mail to the attention of:

News Editor

Environmental Health Perspectives

National Institute of Environmental

Health Sciences

Mail Drop EC-15

PO Box 12233

Research Triangle Park, NC 27709 USA

RESEARCH SECTION

The Research Section of the journal offers five formats:

Research Articles are original manuscripts reporting scientific research and discovery in the broad field of environmental health. Original manuscripts on ethical, legal, social, and policy issues are also accepted for this section. Research articles may come from any field of scientific research, from the most basic molecular biology and biochemistry to atmospheric physics, ecology, and engineering, as well as related fields of social science and ethics. The criteria for publication are weighted toward quality and environmental significance. Manuscripts are assessed according to their originality, scientific merit, and experimental design, and evaluated for conciseness, clarity, and presentation. *EHP* also attempts to address certain ethical problems during the review process and requires assurances that all human and animal subjects have been treated humanely and with regard for the alleviation of suffering. Our review also considers scientific integrity as part of the process. Papers that do not conform to word limits will be returned to the author(s) for shortening before the review process can begin; please see the section on word limits.

Commentaries present information and insight on a particular topic. Factual data should be included to substantiate arguments. Abstracts are required, and articles must be appropriately referenced.

Reviews are narrowly focused articles that emphasize recent developments in a particular field of research. Lengthy historical perspectives are not appropriate.

Meeting Reports are short synopses of conferences, symposia, or workshops in which the

scientific objectives and achievements of a meeting are described.

Workgroup Reports are presentations by expert scientific committees that include reviews of existing information and that summarize research findings on specific topics, present new information, and recommend methods, courses of action, or further research needs for the scientific community.

ENVIRONMENTAL MEDICINE SECTION

Five formats exist for reporting on the clinical manifestations of environmentally related disease: Commentaries, Reviews, Research Articles, Grand Rounds, and Case Reports. Articles that demonstrate translational research (i.e., the application of research advances to a clinical setting) are particularly encouraged. Authors are encouraged to include public health, legal, and ethical issues.

Grand Rounds in environmental medicine articles present discussions of clinical presentations resulting from environmental exposures. The articles typically involve presentations of individual patients (or a group of patients), but they may also deal with community health issues. An example of a community health issue is a suspected outbreak of anthrax with hostile intent, with the Grand Rounds concentrating on clinical issues such as the dispensing of antibiotics for prophylaxis, potential side effects, efficacy, and risk benefit. Articles should be divided into an Abstract, Case Presentation (or Community Presentation), Discussion, and Conclusion.

Case Reports differ from Grand Rounds articles in that the diagnosis pertaining to the clinical presentation is not necessarily conclusive. Instead, evidence for an environmental etiology may be indirect: for example, a case report of hepatitis that is suspected to be related to a chemical that had not been previously linked with hepatitis. Similar to Grand Rounds, Case Reports should include an Abstract, Case Presentation, Discussion, and Conclusion.

Reviews in environmental medicine are narrowly focused articles that emphasize recent developments in a particular area of environmental medicine. Of particular interest are reviews that provide guidance on clinical approaches and/or in-depth discussions of areas of uncertainty that could benefit from well-designed research.

CHILDREN'S HEALTH SECTION

Children have unique vulnerability to environmental factors, and *EHP* is a pioneer in the dissemination of information on children's environmental health issues. This section contains contributions covering environmental science, toxicology, risk assessment and management, pediatric environmental medicine, social sciences, and legal and regulatory issues. Basic and applied research is reported in this section in the form of Commentaries, Reviews, Research Articles, Mini-Monographs, Meeting Reports, and Workgroup Reports.

TOXICOGENOMICS SECTION

The development of powerful molecular tools for genomic research has provided an area of unprecedented research for investigators in toxicology and environmental health. Researchers in toxicogenomics conduct studies to elucidate biological responses in the genome after exposure to environmental toxicants and stressors.

This quarterly section of *EHP* focuses on the field of toxicogenomics and extends to the related disciplines of pharmacogenomics, proteomics, metabolomics, metabonomics, molecular epidemiology, translational aspects of genomic research, and molecular medicine. The section includes Editorials, Environews Articles, Commentaries, Reviews, Research Articles, Mini-Monographs, Meeting Reports, Workgroup Reports, and Book Reviews. Special sections are devoted to the National Center for Toxicogenomics, an events calendar, career opportunities, and grants.

Submissions to the Toxicogenomics Section must follow the guidelines based on the document called *Minimum Information About a Microarray Experiment – MIAME*, developed by the Microarray Gene Expression Data society (<http://www.mged.org/miame>). On acceptance, all integral data supporting the paper's conclusions should be submitted to the ArrayExpress (<http://www.ebi.ac.uk/arrayexpress>) or GEO (<http://www.ncbi.nlm.nih.gov/geo/>) databases.

MINI-MONOGRAPH SECTION

Mini-Monographs are published throughout the year as special sections in the journal. Mini-Monographs consist of four to six manuscripts that address a specific topic and may include original research, perspective reviews, or a combination of original research and review. These series go beyond the limits of the traditional reviews by providing insights and depth of coverage that a traditional review article cannot. Mini-Monographs are intended for researchers, teachers, legislators, and the informed public.

Mini-Monograph topics may be proposed by a guest editor or selected by the editorial board. Proposals submitted to the editor-in-chief are reviewed for originality and scientific merit, apparent need for the Mini-Monograph, timeliness of the subject matter, usefulness to workers in the field, environmental significance, completeness in covering the proposed topic, clarity of presentation, and appropriateness and scientific credibility of the proposed contributors.

Articles submitted for inclusion in a Mini-Monograph must be of the same high scientific quality as required for the regular monthly issues. However, research articles may be of more limited scope when considered in the context of the Mini-Monograph. Review articles may be of a broader nature, providing summaries of new developments in environmentally relevant areas, a balanced perspective for these new findings, and inclusion of sufficient background information to accommodate those not familiar with the specific topic.

ANNOUNCEMENTS SECTION

Announcements include a calendar of upcoming events such as conferences, workshops, and public hearings. Appropriate listings are made for industrial, academic, regulatory, and legal activities. This section also includes fellowship announcements, grant announcements, positions available, and a book review.

EHP CHINESE-LANGUAGE EDITION

EHP has expanded its international presence by establishing a quarterly *Chinese-Language Edition*. This edition includes original and previously

published Environews articles translated into Chinese. It also includes Editorials and Commentaries written by scientists directly involved in research in the Chinese-speaking areas of the world. Basic and applied research is reported as Chinese translations of previously published Commentaries, Reviews, Research Articles, Mini-Monographs, Meeting Reports, and Workgroup Reports. Additional resource information from a variety of *EHP* and external sources is also published.

MANUSCRIPT PREPARATION AND SUBMISSION

EHP covers all disciplines engaged in the broad field of environmental health sciences. Authors should therefore write in a clear and simple manner, avoiding unnecessary jargon, so that the article is understandable to readers in other disciplines. Articles intended for the *Chinese-Language Edition* must be submitted in both English and Chinese.

CONFORMANCE TO EHP STYLE REQUIREMENTS

Manuscripts submitted to *EHP* must conform to all *EHP* style requirements. Authors should take special note of requirements for citations/references, figures, and tables. Manuscripts that do not conform will be returned to the authors for modification before the initiation of the peer review process. This step will cause a significant delay in the publication of the manuscript.

The authors must ensure that the final PDF supplied to *EHP* is accurate. Once the manuscript is accepted, the PDF will be published online generally within 24 hours after acceptance. Any substantive changes after this stage will require an erratum to be published.

MANUSCRIPT PREPARATION

Manuscripts must be written in the active voice and be typed double-spaced in English on only one side of the paper. Type the article on white paper, 8.5 × 11 inch (216 × 279 mm) or ISO A4 (212 × 297 mm), with margins of at least 1 inch (25 mm). Number pages consecutively, beginning with the title page. Numbering of lines is preferred but not required. The reference list, tables, and figure legends should begin on separate pages and should also be double-spaced.

Page one: The first page should list title, authors (first or second names spelled out in full), full address of the institution where the work was performed, and affiliation of each author. Titles should not exceed 20 words and should generally not contain abbreviations or numerical values. Indicate the author to whom page proofs should be sent, and include complete address for express mail service, telephone and fax numbers, and e-mail address.

Page two: 1) Place a running title, not to exceed 50 characters and spaces, on this page. 2) List on this page 5–10 key words for indexing purposes, and 3) include acknowledgments and grant information, not to exceed 50 words. Nomenclature and symbols should conform to the recommendations of the American Chemical Society or the International Union of Pure and Applied Chemistry. 4) Include a list of

all abbreviations with definitions used in the manuscript.

Page three: Provide an outline of section headers (i.e., abstract, introduction, methods, etc.) on this page. This outline will facilitate copyediting and manuscript layout.

Page four: All articles must include an abstract not to exceed 250 words, which should be placed on this page. Do not include references or details of the materials and methods in the abstract.

Page five and subsequent pages: Text should begin on the fifth page. Concise headings (not to exceed eight words) may be used to designate major sections. Recommended headings, where appropriate, are "Materials and Methods," "Results," "Discussion" or "Conclusion," and "References." Do not include tables and figures in the text. Place them after the References section.

Articles intended for publication in the Environmental Medicine Section as a Case Report or Grand Rounds article should include an abstract and the following three sections: "Case Presentation," "Discussion," and "Conclusion." Articles intended for the *Chinese-Language Edition* must include a 500-word executive summary in English.

ARTICLE LENGTH

Editorials should not exceed 1,000 words including references. Correspondence should not exceed 750 words and may include a brief table or small figure; letters should be appropriately referenced. Commentaries should not exceed 5,000 words, including tables, figures, and references. Research Articles should not exceed 7,000 words, including tables, figures, and references. Reviews and Workgroup Reports should not exceed 8,000 words, including tables, figures, and references. Meeting Reports should not exceed 5,000 words, including tables, figures, and references. The "Case Presentation" in Grand Rounds and Case Report articles should be less than 1,000 words, and the remainder of the paper should not exceed 5,000 words including tables, figures, and references. Visual images (e.g., X rays, microscopic pathology) or other graphics are encouraged. In determining the word count for all submissions, assume each figure and table accounts for 250 words of the total word count.

REFERENCES/CITATIONS/FOOTNOTES

References and citations should be formatted according to *EHP* style (examples provided below). This will reduce copyediting time and the number of author queries included in page proofs. Authors should double-check all references for accuracy and completeness of information, spelling, accents, symbols, subscripts and superscripts, and italics. Authors are fully responsible for the accuracy of their references. Check the final draft to make sure citations and references match. Any manuscript that is not properly formatted will be returned to the author for correction before review.

Footnotes

Do not use footnotes; instead, place all textual information within the manuscript and all citations/references in the proper form.

CITATIONS

All citations must be placed in name/date form. Place the citation immediately after the textual information cited, placing name and date within parentheses without a comma.

Single author: (Burkholder 1998)

Two authors: (Burkholder and Glasgow 1997)

Three or more authors: Use first author's name plus "et al." (Burkholder et al. 2001).

Different first authors but same last name and date: Use first author's last name plus initial(s) (Smith A 2000; Smith J 2000)

Several sources cited at one time: List publications alphabetically by author in the citation. Separate publications by the same author(s) with commas and those by different authors with semicolons; (Burkholder and Glasgow 1997a, 1997b; Peal 1975; Wee 1997).

Quotations: Provide references for any quotations used in the text. For example:

According to Rubin et al. (2001), "it is only with a multidisciplinary and collaborative approach that the environmental and public health significance of *Pfiesteria* will be fully understood."

All manuscripts submitted but not yet accepted, unpublished data, and personal communications—any items that must be cited but are not accessible to the public—must appear in the text in parentheses but should not be listed in the references: (Ramsdell JS, Moeller PDR. Personal communication); (Glasgow HB. Unpublished data).

REFERENCES

Authors are fully responsible for the accuracy of their references. The list of references should begin on a separate page. All references must include

- Author/editor last name plus initials (for six or fewer authors; if there are more than six authors, use "et al." after the sixth) or authoring agency
- Year of publication
- Full title of article or chapter (lower case)
- Title of journal (abbreviated according to *Biosis* or *Index Medicus*) or book/proceedings in title case
- City/state/country of publication and name of publisher
- Volume and inclusive page numbers
- DOI reference, if known.

If you are uncertain what to include, please include all information.

List references alphabetically by the last name of the first author. If the first author has more than one publication, list references in alphabetical order (letter by letter) of subsequent authors. If the first author shares the last name with another first author (Smith JM vs. Smith RB), alphabetize by initials. If you list more than one publication by the same author/group of authors, use a 3-em dash (——) instead of the name(s); arrange publications by date, early to late. If you list more than one publication published in the same year by the same author/group of authors, use a, b, c, d, and so on to distinguish the publications.

TABLES

Each table must begin on a separate page. Tables should be numbered with Arabic numerals, followed by a brief title (not to exceed 25 words). When setting up tables, do not use table layouts; type tables as text and use tabs to align the columns. Tables should contain no more than three layers of column headings, and the entire table should fit on one journal page or less. List abbreviations and definitions under each table. General footnotes to tables should be indicated by lowercase superscript letters beginning with “a” for each table. Footnotes indicating statistical significance should be identified by asterisks (*, **) and number signs (#, ##). Type footnotes directly after the abbreviations.

FIGURES

Figure legends should be typed on one page using word processing software to precede the figures and submitted electronically in a single file with the rest of the text. If you have questions or problems complying with these instructions, contact *EHP*.

All letters, numbers, symbols, and lines should all be clearly legible and differentiable. Provide a key defining all representational elements (dotted/dashed lines, symbols, asterisks, error bars, etc.) for each figure. All axes should be clearly labeled, giving both the measure and the unit of measurement where applicable. No lines of demarcation or measurement should appear inside the graph itself, only on the axes. Consistency among terms and styles used in figures is desirable. Photomicrographs should include a scale bar in each image, and the length (e.g., 10 μm) should be specified in the typed figure legend.

FORMAT CHECKLIST:

Manuscripts should include these sections in this order:

- Title
- Authors
- Authors' affiliations
- Name and address of corresponding author
- Acknowledgments/disclaimers
- Short running head
- Key words
- Abbreviations
- Outline of manuscript section headers
- Abstract
- Introduction
- Materials and Methods
- Results
- Discussion
- Conclusions
- References
- Tables
- Figure legends
- Figures

SUPPLEMENTAL MATERIAL

Material suitable for inclusion as online documentation, such as kinetic studies, is welcome. Contact the *EHP* editors for instructions regarding submission.

ELECTRONIC SUBMISSION OF MANUSCRIPTS**Initial Submission**

A single PDF should be sent including text, tables, and figures, with particular attention paid to minimizing and optimizing graphics (i.e., image size includes file dimensions and resolution). File size should not exceed 1 MB, preferably less than 500KB. Graphics must fit standard letter size paper (8.5 × 11 inches) or smaller. Line graphs generally provide acceptable images at 72–100 dpi. Photographs seldom require > 300 dpi; if optimized generally 100 dpi is acceptable. (Higher resolution images of photographs will be required if manuscript is accepted for publication.) Figures must be identifiable in the PDF file. If there are questions about preparing PDF files, please contact the journal.

Manuscripts may be submitted in one of three ways:

1. E-mail the manuscript file, the conflict of interest declaration form, and a separate cover letter to: EHPsubmit@niehs.nih.gov
2. Submit the PDF file, the conflict of interest declaration, and the cover letter via the FTP server. Software is available free of charge over the Internet. For Windows PC users, go to <http://www.tucows.com/preview/195136.html>. For Macintosh users, go to <http://fetchsoftworks.com/>. A secure FTP server is available at ehpdrop.niehs.nih.gov for materials receipt and transfer at the *EHP* editorial office:
 - User name: EHPauthor
 - Password: the user's e-mail address.
3. Mail one hard copy of the cover letter, the conflict of interest declaration, the manuscript, and a disc (3.5 inch floppy, CD, or zip) with the electronic version to:
 - Editor-in-Chief—for submissions to the monthly and Chinese-Language editions
 - Toxicogenomics Editor—for submission to the Toxicogenomics Section

Children's Health Editors—for submission to the Children's Health Section
 Medical Editor—for submission to the Environmental Medicine Section

Environmental Health Perspectives
 National Institute of Environmental Health Sciences
 Mail Drop EC-15
 PO Box 12233
 79 Alexander Drive
 4401 Building, Room 3102
 Research Triangle Park, NC 27709 USA

If you do not have access to Acrobat software, you may submit your manuscript as a Word or WordPerfect File. *EHP* will convert the file to PDF. However, because of potential conversion problems, *EHP* cannot guarantee complete accuracy in the electronic copy that is sent for review.

Electronic submission of papers (by e-mail or disk) will expedite the entire review process between authors, expert reviewers, and *EHP* editors. Authors may continue to submit papers to *EHP* by mail, but processing will necessarily be slower if you do not include an electronic file on a disc with the paper copy.

Submission of Revised Manuscript

After the review process is completed, *EHP* will e-mail the corresponding author the reviewer comments. If *EHP* requests revisions or accepts the manuscript at this point, please submit all of the following:

- 1) All text, tables, and figure legends in one electronic file (MicrosoftWord or WordPerfect). Make sure that any symbols and/or equations correctly appear on printed copies and that that all figures and tables are called out in the body text in numerical order
- 2) Each figure as a separate file at 300 dpi, TIFF or JPEG format. **Do not embed figures in word processing file** (see below for specific figure formats)
- 3) A PDF file that includes the entire manuscript with all tables and figures (see the *EHP*-in-Press distiller preferences below). Each figure must be labeled on the front with the figure number. **This is the file that will be published online if the manuscript is accepted. It will be published exactly as you submit it. No copyediting or manipulating of the file will be done at *EHP***
- 4) A cover letter with responses to the reviewers' comments
- 5) Three hard copies of the manuscript and figures.

Mail three hard copies of the cover letter, manuscript and figures and e-mail the electronic files, indicating the operating system and word processing software versions used, to ehpsubmit@niehs.nih.gov

OR

Mail three hard copies of the cover letter, manuscript and figures with a disc(s) (floppy, zip, or CD) with all of the electronic files. Please label the disc with your last name, the title of the manuscript, the *EHP* manuscript number and the operating system and word processing software versions used.

Figure Format Requirements (for Revised Manuscripts)

Format all figures in Macintosh format (if possible) and indicate the type of software used to create the figures.

Electronic images should be in TIFF or JPEG format at a resolution of 300 dpi or higher for color and grayscale images, and 600 dpi or higher for line art (black-and-white art). JPEG files should be saved on the "highest quality" setting. Color images should be RGB and saved at 8 bits per channel, minimum. Figures may be reduced or enlarged to fit our layouts, so sufficient resolution is essential.

Vector images should be saved as editable EPSs. Any images embedded in the EPS should also be included on the disk in a separate file. Do not convert text to path outlines before submission.

Required Cover Letter

In your cover letter, identify the *EHP* edition (monthly or Chinese-Language) or *EHP* section (Mini-Monograph, Environmental Medicine, Toxicogenomics, or Children's Health) for which the manuscript should be considered. Also please provide:

- Assurances that the manuscript is *a*) an original work, *b*) has not been previously published, and *c*) is not under consideration for publication elsewhere
- A statement that all animals used in the research have been treated humanely according to institutional guidelines, with due consideration to the alleviation of distress and discomfort; the identity of the source of those guidelines must be provided
- A statement that participation of human subjects did not occur until after informed consent was obtained
- Confirmation that all authors have disclosed any potential competing financial interests regarding the submitted article and what they are (required Competing Financial Interest Declaration form: <http://ehp.niehs.nih.gov/cfi.pdf>)
- Written permission from copyright holder (usually the publisher) to reproduce figures, tables, questionnaires, or a substantial block of text in both print and electronic form
- A statement indicating that *a*) all authors have read the manuscript, *b*) agree that the work is ready for submission to a journal, and *c*) they accept responsibility for the manuscript's contents
- The names of possible reviewers for the manuscript, including e-mail addresses of the potential reviewers
- Information on the software programs used, the file names, and the number of tables and figures for each submission (see "Files and Formats" for electronic file requirements). Inquiries may be made by calling 919-541-3406 or by sending a fax to 919-541-0273.

Manuscript Processing

All manuscripts will be sent by e-mail to three expert reviewers and returned to *EHP* by

electronic transmission to accelerate the peer review process. After editorial consideration, a decision letter and reviewers' comments will be e-mailed to authors.

Be aware that, if the revised article is accepted, the PDF version will be published online within 24 hours of acceptance (<http://www.ehponline.org>). After acceptance, the PDF version will be assigned a completely citable DOI (Digital Object Identifier) code. The PDF file of the article will be included in the *EHP*-in-Press section of our website.

Electronic material will be converted at *EHP* to a desktop publishing format and copyedited. The copyedited version, with embedded author queries, will be converted to a PDF version for electronic transmission of page proofs to authors. The authors can use free Acrobat Reader software (<http://www.adobe.com/products/acrobat/alternate.html>), available over the Internet, to proof the material.

Authors should return corrected page proofs by fax or overnight mail. A list of itemized changes and their locations must accompany the page proofs or be sent by e-mail.

The PDF version of the *EHP*-in-Press articles will be replaced with the copyedited and stylized version as soon as possible but, importantly, the DOI code will remain with the copyedited article. In addition to the DOI code, the copyedited article will have assigned volume and page numbers that will allow full conventional citation. The final versions may be slightly different as a result of the editing process but there will be no substantive changes allowed. Any substantive changes at this stage will require an erratum to be published.

Articles will be published in the print version in order of acceptance as journal space permits.

Acrobat Distiller Preferences for Preparing PDFs for EHP-in-Press

Software Required: Adobe Acrobat Distiller 5.0 or later

Security Settings: Passwords should not be set in the document.

Permissions (the following should be checked):

- Enable Content Access for the Visually Impaired
- Allow Content Copying and Extraction
- Changes Allowed: General Editing, Command and Form Field Authoring
- Printing: Fully Allowed

Job Options:

General:

File Options:

- Compatibility: Acrobat 5.0 (PDF 1.4)
- Optimized For Fast Web View
- Distill Pages: All
- Binding: Left
- Resolution: 300 dpi

Default Page Size:

- Units: Inches
- Width: 8.5
- Height: 11

Compression:

Color Images:

- Bicubic Downsampling to 300 dpi for images above 450 dpi
- Compression: Automatic
- Quality: Medium

Grayscale Images:

- Bicubic Downsampling to 300 dpi for images above 450 dpi
- Compression: Automatic
- Quality: Medium

Monochrome Images:

- Bicubic Downsampling to 300 dpi for images above 450 dpi
- Compression: CCITT Group 4
- Compress Text and Line Art (checked)

Fonts:

- Embed All Fonts
- Subset Embedded Fonts When Percent of Characters Used is Less Than 100%

Color:

- Settings File: U.S. Prepress Defaults
- Device-Dependent Data:
 - Preserve Overprint Settings
 - Preserve Under Color Removal and Black Generation
 - Preserve Transfer Functions

Advanced (only check the following options):

Options:

- Allow PostScript File to Override Job Options
- Preserve Level 2 copypage Semantics
- Illustrator Overprint Mode
- Convert Gradients to Smooth Shades
- Document Structuring Conventions (DSC):
 - Process DSC Comments
 - Resize Page and Center Artwork for EPS Files
 - Preserve Document Information from DSC

Instructions to Advertisers

EHP publishes paid product or service advertisements.

ADVERTISEMENTS

Advertisements are run subject to their appropriateness and at the discretion of the editors. The editors reserve the right to refuse, amend, withdraw, or otherwise handle all advertisements submitted at their discretion. Publication of advertisements in *EHP* does not imply any endorsement of the editors or of the NIEHS.

Public information advertisements are run free of charge as space becomes available.

For more information, see Advertising Information at <http://ehponline.org> under Services, or contact Gwendolyn Dowd (telephone, 919-653-2584; e-mail, ehpads@ehp.niehs.nih.gov).
