"PlugGED In" Kicks Off In Lebanon

On February 17, 2009, Senator Jim Webb and Virginia Secretary of Technology Aneesh Chopra visited Lebanon to announce the kickoff of an initiative to prepare high school dropouts for entry-level technology jobs while they study for the GED_® tests.

The initiative, known as "PlugGED In," began as a pilot program in Russell County on February 3. Partners in the initiative include the Literacy Institute at Virginia Commonwealth University (VCU), the Virginia Department of Education (VDOE), Southwest Virginia Community College, University of Virginia at Wise, Southwest Regional Adult Education (a division of Russell County Public Schools), Microsoft Inc., Northrop Grumman, and CGI Inc.

The PlugGED In curriculum is designed to prepare participants to pass the GED tests while providing project-based instruction in the technology skills that tech-sector employers identify as crucial for entry-level employees.

Individuals who complete the six-month program will earn a GED certificate and a Career Readiness Certificate (CRC), build a technology portfolio, have an opportunity to earn Microsoft certifications free of charge, and have a guaranteed interview with Northrop Grumman, which has a facility in Russell County.

"This could be a lifechanging experience for these young men and women," Chopra said. "And if successful, this approach can be replicated by partnerships across the Commonwealth."

Chopra and a planning team assembled by Board of Education President Mark Emblidge began work on the idea in early 2008. The team included representatives from the

Literacy Institute at VCU, VDOE, the University of Kentucky, and Vanderbilt University.

"When we got everyone to the table, we saw a real opportunity to align adult education with the needs of major employers," Dr. Emblidge said. "Everybody wins- the student, the employers, and the community."

Census data show that a high percentage of working-age adults in Southwest Virginia lack a high schoollevel credential. After the outlines of the PlugGED In program were developed, Northrop Grumman and CGI Inc., both of which established facilities in Russell County in recent years, signaled their eagerness to participate in a pilot.

"Northrop Grumman needs qualified IT professionals at our facility in Lebanon," said Jim Tiscornia, Program Manager with Northrop Grumman. "The PlugGED In program will play an important role in helping us fill these needs." Students will receive guidance from volunteer mentors from both Northrop Grumman and CGI Inc., as well as career coaching from the community college.

PlugGED In classes will meet three nights a week at the University of Virginia at Wise's Southwest Virginia Technology Development Center in Lebanon. Classes will be co-taught by instructors from Southwest Regional Adult Education and Southwest Virginia Community College. As part of the curriculum, students will have the opportunity to prepare for any one of several Microsoft certifications free of charge through partnerships with the Microsoft Academy and Southwest Virginia Community College.

"This partnership aligns perfectly with Microsoft's mission to enable people and businesses throughout the world to realize their full potential," said Linda Zecher, Microsoft's corporate vice-president for Worldwide Public Sector. "We're thrilled to be involved with this initiative because it confronts a serious problem with an innovative solution that will pay dividends to the community's citizens and businesses."

"Virginia has pioneered programs that meet adults where they are and help them earn a GED certificate quickly," said Superintendent of Public Instruction Patricia I. Wright. "Now we're looking at ways to combine GED preparation with industry certification and training in the hard and soft skills young adults must have to succeed in the workforce."

The Virginia Department of Education's recent efforts toward expanded testing access and curriculum development have resulted in substantial increases in testing and credentialing. In 2002, 14,982 people took the GED tests in Virginia, and 11,830 GED credentials were awarded. In 2008, 24,492 people took the tests, and the commonwealth awarded 16,479 certificates. Using Virginia's innovative Fast Track GED curriculum, many people are able to complete the program in just three to six months.

2008 Regional GED Testing Report

The following data was collected from January 1, 2008 to December 31, 2008. The number of people tested includes those who did partial testing and those who took the complete battery of tests. Partial testing consists of taking one or more of the GED subject tests without completing all five. Those who passed consist of all who passed the complete battery of five tests.

Testing Center	# Tested	# Took complete battery	# Passed complete battery	# Incomplete testers	Pass Rate
Buchanan	102	81	67	21	82.72%
Dickenson	92	62	51	30	82.26%
Russell	151	108	96	43	88.89%
