Name: $\qquad$ R. Hammack

Score: $\qquad$
Directions Except in a problem designated short answer, you must show your work to get full credit. This test is closed-book and closed-notes. No calculators or other electronic devices are allowed. Simplify your answers if it is easy to do so, but you may leave complex answers unsimplified, as in, for example, $7^{15}-7$ !. All you will need is something to write with. Scratch paper will be provided.

## 1. ( 9 points) Short answer.

(a) Write $\{\ldots-13,-3,7,17,27,37, \ldots\}$ in set-builder notation.
(b) Write the set $\{X: X \subseteq\{1,2,3,4\},|X| \geq 3\}$ by listing its elements between braces.
(c) Write the set $\mathscr{P}(\{-1,0,1,2\}-\mathbb{N})$ by listing its elements between braces.
2. (12 points) Short answer. Suppose $X=\{a, b, c, d, e\}$ and $Y=\{d, e, f, g\}$ are two sets in a universal set $U=\{a, b, c, d, e, f, g, h\}$.
(a) $X \cap \bar{Y}=$
(b) $\overline{X \cup \bar{Y}}=$
(c) $X-\mathscr{P}(X)=$
(d) $(X \cap Y) \times(Y-X)=$
3. (9 points) Write a truth table for $P \Leftrightarrow \sim Q$ and $\sim(P \Leftrightarrow Q)$. Based on this, say whether or not these two expressions are logically equivalent.
4. (20 points) This question concerns length-4 lists made from the letters $A, B, C, D, E, F$.
(a) How many such lists are there in which repetition is not allowed?
(b) How many such lists are there if repetition is allowed, and exactly one entry is a vowel?
(c) How many such lists are there if repetition is allowed, and there is at least one repeated entry?
(d) How many such lists are there if repetition is not allowed, and the list is in alphabetical order?
5. (8 points) You are going to distribute 25 one-dollar bills among six friends. (So each friend could potentially get between 0 and 25 dollars.) In how many ways can this be done?

6. (8 points) This problem concerns length-6 lists made from the symbols $A, B, C, D, E, F, G, H$, with no repetition. How many such lists have two consecutive vowels?
(For example, $A E C D B F$ or $C H E A D F$, but not $B C A D F E$, etc.)
7. (8 points)
(a) A row of Pascal's triangle begins as $18285670 \ldots$..

Write out the entire row. (You can do this without working out the triangle from top down.)
(b) Using part (a) above, and the binomial theorem, expand $(x-1)^{8}$. (Please simplify to the extent possible - it's easy to do!)
8. (8 points) Explain why $4^{n}=\binom{n}{0}+3\binom{n}{1}+3^{2}\binom{n}{2}+3^{3}\binom{n}{3}+3^{4}\binom{n}{4}+3^{5}\binom{n}{5}+\cdots+3^{n}\binom{n}{n}$.
9. (10 points) Consider lists of length 6 made from the letters $L, I, S, T, E, D$, with repetition allowed. How many such lists have the property that the list begins with $T$ or the list has exactly three $T$ 's?
10. (8 points) A password for a certain account must be 7 characters long, consisting of letters of the English alphabet (upper or lower case, but no numbers or special symbols). Also the password cannot be all lower case. How many such passwords are possible?
