# MATH 122 <br> (Day 3) 

# The Seven Frieze Pattern Types 

Richard Hammack
http://www.people.vcu.edu/~rhammack/Math122/

## Today's Goals

- Review the 5 types of symmetry that a frieze pattern may possess.

## Today's Goals

- Review the 5 types of symmetry that a frieze pattern may possess.
- Examine how combinations of symmetries force other symmetries.

## Today's Goals

- Review the 5 types of symmetry that a frieze pattern may possess.
- Examine how combinations of symmetries force other symmetries.
- See that there are 7 possible combinations of frieze symmetries.

## Today's Goals

- Review the 5 types of symmetry that a frieze pattern may possess.
- Examine how combinations of symmetries force other symmetries.
- See that there are 7 possible combinations of frieze symmetries.
- Analyze examples (from Richmond's architecture).

## Today's Goals

- Review the 5 types of symmetry that a frieze pattern may possess.
- Examine how combinations of symmetries force other symmetries.
- See that there are 7 possible combinations of frieze symmetries.
- Analyze examples (from Richmond's architecture).
- New assignment

There are five baic symmetries for frieze patterns:

There are five baic symmetries for frieze patterns:

T (Translation)

There are five baic symmetries for frieze patterns:
T (Translation)
G (Glide reflection)
园

There are five baic symmetries for frieze patterns:

There are five baic symmetries for frieze patterns:

There are five baic symmetries for frieze patterns:

Certain combinations of symmetries force other symmetries

Certain combinations of symmetries force other symmetries
$T$ (always)

Certain combinations of symmetries force other symmetries
$T$ (always)
T T T T T T

Certain combinations of symmetries force other symmetries $T$ (always) $\quad \mathrm{T}$ T T T T T $\}$ Can't avoid $T$.

Certain combinations of symmetries force other symmetries
